

PowerflexPlus+

Yellow becomes green, the new PowerflexPlus+

Our Powerflex coated lifting slings are often used on construction sites, in outdoor conditions and when wet and dirty water is present. Especially for these applications, now we have significantly improved our Powerflex thin coating. By changing the main components, we were able to reach a 2 - 3 times better lifetime in combination with wetness. We make this better performance clear by name with the Plus+ behind the well-known Powerflex name. And to make this improvement also visible, we have given the coating a new green color.

The very compact PowerflexPlus+ thin coating covers the lifting sling on one side or completely. It is extremely abrasion-resistant and ideal for very rough surfaces. The PowerflexPlus+ coating also protects the fabric against dirt and the penetration of particles.

Here are the well-known advantages of the PowerflexPlus+ thin coating:

- For rough surfaces
- Highly wear resistant
- Seals the surface
- Easy to clean
- No wrinkling of the fabric possible
- Now much longer life in outdoor use
